ISBN-13: 9783540200451

Uveitis and immunological disorders encompass a wide spectrum of potentially blinding diseases that are seen in daily practice by many ophthalmologists. In recent years enormous progress has been made understanding the principal mechanisms of inflammatory and immunological processes in ocular disorders.

With a broad spectrum of contributions, including diseases affecting the conjunctiva, sclera and cornea as well as intraocular inflammation, this publication will serve not only as a valuable source of up-to-date information for ophthalmologists but also be of interest to pediatricians, specialists in internal medicine and dermatologists confronted with inflammatory eye diseases. Although mainly focused on clinical aspects of inflammatory eye diseases, several contributions address aspects such as immune mechanisms and genetics of these diseases.

### Broad Subjects:

Clinical Medicine

### Specific Subjects:

Pediatrics; Dermatology; Internal Medicine; Ophthalmology
