

Parasitology Database

The Parasitology Database covers parasitology in its broadest sense, encompassing helminthology, protozoology, medical and veterinary entomology and mycology. The database contains bibliographic citations and abstracts from the scientific literature on all aspects of the biology and control of parasites and vector-borne diseases of humans and domestic and wild animals (including fish).

Source: CAB International

Compiled by subject specialists at CABI Publishing, the Parasitology Database contains more than 500,000 abstracts and citations, with 20,000 records added annually. Containing over 30 years of research from over 75 countries it provides an ideal source for professionals and students requiring an international perspective on the wealth of information available on parasitology.

The Parasitology Database covers over 30 years of scientific research into:

- * Nematodes
- * Cestodes
- * Digeneans
- * Monogeneans
- * Acanthocephalans
- * Parasitic protozoa
- * Parasitic and vector arthropods (such as insects, ticks, mites and crustaceans)
- * Pathogenic fungi
- * Vector-borne viruses and bacteria

Broad and Specific Subjects:

n Science

Animal Sciences- Parasitology and Infectious Diseases

Access Options:

- n SilverPlatter Internet, updated Quarterly
- n SilverPlatter Local, updated Quarterly

Interface:

n OvidSP

Other Information:

- n Coverage: 1973 - Present
- n Print Equivalent: A Range of Printed Abstract Journals from CABI
- n Data Type: Bibliographic with Abstracts
- n Number of Records: 500,000+
- n Records Added Annually: 20,000+
