

British Nursing Index

British Nursing Index is a nursing and midwifery database, covering over 220 UK journals and other English language titles. A significant feature is the inclusion of articles relevant to nurses and midwives from medical journals and those for healthcare management and professions allied to medicine.

Source: BNI Publications

Produced by a partnership of UK libraries serving nurses, BNI is the most current nursing database for UK journals, and has featured concise original abstracts for every reference included since January 2004. Its currency and coverage make it an essential resource for current trends in UK nursing care and policy for clinical, academic, and management staff and researchers.

Broad Subjects:

Nursing

Specific Subjects:

Nursing
