

Global Health

The definitive international public health database, Global Health is the only specialist bibliographic, abstracting and indexing database dedicated to public health research and practice.

Source: CAB International

Derived from over 5,000 journals, plus reports, books and conferences, Global Health contains over 1.2 million scientific records from 1973 to the present. Over 100,000 records added each year, and over 97% of these records include an abstract.

Publications from over 158 countries in 50 languages are abstracted, and all relevant non-English language papers are translated to give access to research not available through any other database.

The database's open serials policy and coverage of international and grey literature means that 60% of material contained in Global Health is unique to the database. Everything from proceedings, patents, theses, electronic only publications and other difficult-to-obtain sources are included.

Broad and Specific Subjects:

- n Clinical Medicine
 - Internal Medicine- Infectious Diseases
 - Nutrition & Dietetics
- n Public Health
 - Community Health & Disease Prevention; Epidemiology
- n Science
 - Animal Sciences- Parasitology and Infectious Diseases

Access Options:

- n Ovid Internet, updated Monthly
- n Ovid Internet, updated None
- n SilverPlatter Internet, updated None
- n SilverPlatter Local, updated None
- n SilverPlatter Internet, updated Quarterly
- n SilverPlatter Local, updated Quarterly

Interface:

- n OvidSP

Other Information:

- n Coverage: 1973 - Present
- n Data Type: Bibliographic with Abstracts
- n Records Added Annually: 100,000+
- n Print Equivalent: A range of printed abstract journals
- n Number of Records: 1.2 million+
