

Global Health

The definitive international public health database, Global Health is the only specialist bibliographic, abstracting and indexing database dedicated to public health research and practice.

Source: CABI Publishing

Derived from over 3500 journals, plus reports, books and conferences, Global Health contains over 1.2 million scientific records from 1973 to the present. Over 90,000 records added each year, and over 95% of these records include an abstract.

Publications from over 158 countries in 50 languages are abstracted, and all relevant non-English language papers are translated to give access to research not available through any other database.

The database's open serials policy and coverage of international and grey literature means that 40% of material contained in Global Health is unique to the database. Everything from proceedings, patents, theses, electronic only publications and other difficult-to-obtain sources are included.

Broad Subjects:

Clinical Medicine; Pharmacology; Life Sciences

Specific Subjects:

Infectious Diseases; Toxicology; Epidemiology & Public Health; Physiology; Geriatrics; Behavioral Science; Alternative Medicine; Food Science & Technology; Nutrition & Dietetics; Evidence-Based Medicine; Microbiology; Nutrition/Diet Therapy; Occupational & Environmental Medicine; Women's Health; Immunology
