

Health and Psychosocial Instruments (HaPI)

Health and Psychosocial Instruments (HaPI) is a database that provides access to information on approximately 15,000 measurement instruments (i.e. questionnaires, interview schedules, checklists, coding schemes, rating scales, etc.) in the fields of health and psychosocial sciences.

Source: Behavioral Measurement Database Services (BMDS)

The full-text of the instruments are not included in the database; however, HaPI can be used to:

- * Discover what instruments exist;
- * Determine the availability of reliability and validity evidence;
- * Track the history of an instrument over time;
- * See what other instruments have already developed in your field of study;
- * Locate ordering information for a known instrument.

Information in the database is abstracted from hundreds of leading journals covering health sciences and psychosocial sciences. Additionally, instruments from Industrial/Organizational Behavior and Education are included.

Broad Subjects:

Clinical Medicine; Behavioral & Social Sciences;
Health Professions

Specific Subjects:

Emergency Medicine & Trauma; Pediatrics; Psychology;
Oncology; Geriatrics; Behavioral Science; Anesthesiology;
Social Work; Critical Care Medicine; Women's Health
