ISSN: 10983015

EISSN: 15244733

Value in Health is a multidisciplinary peer-reviewed journal reporting on evaluations of medical technologies including pharmaceuticals, biologics, devices, procedures, and other health care interventions. The Journal provides a scientific forum for communicating health economics and outcomes research methods and findings, furthering ISPOR's vision that "society allocate scarce health care resources wisely, fairly, and efficiently." Value in Health is also a sounding board for the discussion of health policy issues related to health economics and outcomes studies associated with all medical technologies. Topics include cost effectiveness/cost utility/cost benefit analysis, health utilities/preferences, health-related quality of life/health status research, medical practice guidelines, disease management, study designs (prospective, retrospective, and modeling), and critical reviews of existing literature.
