Behavioral Medicine

Source: Heldref Publications

ISSN: 08964289

Behavioral Medicine, an international, interdisciplinary journal, addresses relationships among behavioral and psychosocial processes and health and disease in humans. In addition to articles on original research, the journal regularly features three-part, state-of-the-art syntheses devoted to selected behavioral medicine topics, including a literature review, suggestions for translating theory into use in health professionals' clinical practice, and a discussion of implications of the research for educational and healthcare policies. This journal, which plays an integrative role in this rapidly growing field, also occasionally publishes brief case reports of preliminary data on unusual physiological or behavioral reactions.
