This new edition incorporates the latest clinical, pathophysiologic, and pathological research on pulmonary circulatory disorders.

Pulmonary Circulation provides physicians with a better understanding of the structure, function, and pathophysiology of the pulmonary circulation. It provides comprehensive coverage from diagnosis and clinical evaluation of patients with pulmonary hypertension to imaging techniques, disorders, and treatment.

This edition also reflects new classifications and all the recommendations from the 2013 World Conference on Pulmonary Circulation as well as current guidelines from the European Society of Cardiology and the European Respiratory Society.

Thoroughly updated to keep up with the brisk pace of discovery and emerging therapies, the book remains an essential resource by providing a balance between scientific review and clinically relevant guidelines for the busy practicing physician.
