This book is intended to help decision-makers use, assess, and appraise the evidence that underpins decisions about the use of therapeutic interventions.

This book will inform decision-makers about the nature of evidence, the strengths and weaknesses of the available approaches, and how these can be most effectively distilled for the purpose of reaching reliable conclusions. It aims to encourage decision-makers to base their judgements about the use of therapeutic interventions on an informed appraisal of the totality of the evidence base. Is it reliable? Is it generalisable beyond the context of the environment in which the primary research has been conducted? Do the intervention's benefits outweigh its harms? Is it cost effective as well as clinically effective? Is it, indeed, fit-for-purpose? Ultimately, good judgement is at the heart of decision-making in therapeutics. An invaluable text for all physicians, pharmacists, nurses, health commissioners and purchasers and indeed anyone having to make decisions concerning evidence-based therapeutics.
