Now in its fifth edition, this book remains a key textbook for trainees in otolaryngology and head & neck surgery. Written with a strong multidisciplinary approach, the book has expanded considerably to include the expertise of editors and contributing authors from a wide variety of backgrounds, including ENT, radiotherapy and pastic surgery, as well as maxillofacial surgery and multidisciplinary support. The result is a much improved balance of content that is thoroughly up to date, and international in flavour.

As a first text for trainee head and neck/ENT surgeons, or as a reference source for practitioners in a variety of related fields, this classic remains the best illustrated and most up-to-date volume in its field.
