Problem Solving in Infection

Features fifty clinical cases are authored by leading experts in infectious disease

With challenging infectious diseases facing all doctors, this case study guide is an invaluable resource. The book covers special patient groups, including community-acquired infection, the immunocompromised patient, and those in critical care. Each clinical case includes learning points, provide background information, and discusses recent developments for each area. The best strategies for management are presented for each case, creating a rich resource of essential information for all physicians who deal with infectious disease.
