Suicide Assessment and Treatment: Empirical and Evidence-Based Practices

Suicide is an event that cannot be ignored, minimized, or left untreated. However, all too often mental health professionals and health care practitioners are unprepared to treat suicidal clients. This text offers the latest guidance to frontline professionals who will likely encounter such clients throughout their careers, and to educators teaching future clinicians.

The book discusses how to react when clients reveal suicidal thoughts; the components of comprehensive suicide assessments; evidence-based treatments such as crisis intervention, cognitive behavior therapy, dialectical behavior therapy, and more; and ethical and legal issues that may arise. Case studies, exercises, quizzes, and other features make this a must-have reference for graduate level courses.
