This book provides much-needed guidelines that are presented in an easy-to-use, systematic format for quick access to core concepts on acute pain management. It is designed to help busy practitioners accurately assess pain in a variety of patient populations, and select patient-appropriate medications and interventions to achieve optimal pain management for adult patients.

Intended for use in primary care, internal medicine, and acute- and long-term care settings, this book covers the topics of acute pain assessment, both pharmacologic and nonpharmacologic treatment options, current information from national guidelines, along with regional anesthesia techniques, patient-controlled analgesia, and epidural pain management.
