

Ovid®

Textbook of Hyperbaric Medicine

Rely on Ovid as the trusted solution that transforms research into results

This textbook, now appearing in its 5th, fully updated, and expanded edition, has become widely recognized as the best exposition available on the topic of hyperbaric medicine and the wide range of applications of hyperbaric oxygen (HBO).

In addition to explaining the basic principles of HBO therapy, and its application in carbon monoxide poisoning and decompression sickness, the textbook looks objectively and critically at its use in numerous other areas, such as stroke, neurological disorders, traumatology and wound healing, infectious diseases, rehabilitation and sports medicine, plastic surgery, emergency medicine, ophthalmology, obstetrics, pediatrics, organ transplantation, and as an adjunct to the treatment cancer.

With over 2,000 up-to-date references and an extensive index, the volume is not just a textbook suitable for those seeking an introduction to this expanding field but also an invaluable resource for specialists. Also included is a chapter on hyperbaric medicine as a specialty, with recommendations on training, practice, and research. Hyperbaric facilities worldwide are also reviewed, with a further chapter on the considerable progress and expansion of the use of HBO in the United States.

Edition	5
Author/Editor	Jain, K. K.
Publisher	Hogrefe Publishing GmbH
ISBN	978-0-889-37361-7
Doody's Star Rating®	★★★★★ Score: 100
