This book provides an extensive overview of the current status of knowledge pertaining to cognitive impairment and dementia associated with Parkinson’s disease, and is intended as a reference for general neurologists, neurology residents and also those with a special interest in movement disorders.

In this edited volume experts in the field describe in detail all aspects of cognitive impairment and dementia in Parkinson’s disease, including epidemiology, spectrum of clinical features, pathology, neurochemistry and genetics, findings in auxiliary investigations, relation to other neurodegenerative disorders, diagnostic process and management, and rounded up by discussion of future research directions and expectations. The text is complemented and enriched with tables, figures and heavily referenced to encompass all relevant literature.
