This highly practical book is the only guide needed to the procedures and
techniques commonly used in anesthesia and critical care medicine. Step-by-step,
it clearly explains each technique and procedure, enabling the reader to fully
understand how and why they are performed. Full colour photographs illustrate
each technique, and every chapter covers the same essential information:
definition, indications, contraindications, complications, equipment, sites, and
technique, for ease of use.

This book will be used by all junior trainees in anesthesia, along with junior doctors
from other specialities working in intensive care units. It will also be useful to any
senior anesthetist who wishes to update or refresh their knowledge, as well as
anyone working in the emergency ward who performs any of these procedures.
