Neurocritical Care

Provides insight into interventions in acute neurologic disorders. Using a case-based approach, this volume emphasizes how to handle comparatively common clinical problems emergently. New to this edition are cases on monitoring and prognostication.

All cases have been carefully revised, and new information, references, and practical tables have been added. Neurocritical Care is both an engaging collection of thought-provoking cases and a self-assessment tool that tests the reader's ability to answer the question, "What do I do now?"
