A guide for musculoskeletal medicine trainees and physicians to the art and science of writing therapy prescriptions and developing individualized treatment plans.

Chapters are written by teams of musculoskeletal physicians, allied health professionals, and trainees to underscore the importance of collaboration in designing programs and improving outcomes.

The book employs a literature-driven treatment approach to the common musculoskeletal problems that clinicians encounter on a daily basis. Each condition-specific chapter includes clinical background and presentation, physical examination, and diagnostics, followed by a comprehensive look at the rehabilitation program. Case examples with detailed therapy prescriptions reinforce key points.
