Neoplastic Hematopathology: An Atlas and Concise Guide

A concise, visual approach to guide practicing pathologists, hematopathologists, hematologists, oncologists, internists, and trainees to a clear analysis and diagnosis of myeloid and lymphoid specimens.

Coverage is comprehensive and for each entity includes a short text description of the key points of the entity - definition; morphologic features; special stains, immunohistochemistry and flow cytometry techniques; differential diagnosis; diagnostic features; special issues (e.g. prognostic or other considerations to note). Images in Neoplastic Hematopathology highlight differential diagnostic features, especially the correlation and integration of standard H & E stains with molecular and immunologic techniques.

Publication Year: 2012
