Diagnostic Pathology: Breast

The book is filled with superior medical images, including gross and microscopic pathology, a wide range of supportive immunohistochemistry, and detailed medical illustrations with numerous examples of morphologic findings. For each anatomical site, you'll find CAP cancer staging and specimen handling protocols - one of the most useful hallmarks of the series- plus detailed immunohistochemistry panels to accompany the images. In addition, uncommonly discussed topics such as pathology of breast cancer status post neoadjuvant chemotherapy and recurrent breast cancer are covered. You'll also find new information on breast cancer classification, including profiles and classification of breast cancer based on DNA copy number changes, gene expression profiling and immunophenotyping. An added emphasis is placed on special challenges, pitfalls and potential limitations of needle core biopsies as well as on the role of immunohistochemistry in the differential diagnosis in breast pathology. This handsome volume will guide the reader through the intricacies of breast pathology and the diagnosis of breast-related diseases.

Publication Year: 2016
Edition: 2nd Ed
Author/Editor: Lester, Susan C.; Hicks, David G.
Publisher: Amirsys Publishing, Inc
