Atlas of Human Infectious Diseases

Provides a much needed practical and visual overview of the current distribution and determinants of major infectious diseases of humans.

The comprehensive full-color maps show at a glance the areas with reported infections and outbreaks, and are accompanied by a concise summary of key information on the infectious agent and its clinical and epidemiological characteristics. Since infectious diseases are dynamic, the maps are presented in the context of a changing world, and how these changes are influencing the geographical distribution on human infections.
