Barrett’s esophagus is a disorder in which the lining of the esophagus is damaged by stomach acid. People suffering from this disorder are at an increased risk for esophageal cancer. Barrett’s Esophagus: The 10th OESO World Congress Proceedings explores the lingering controversies around this condition as well as many advances in the pathogenesis, diagnosis, and treatment of this disease. The volume consists of concise commentaries from over 250 experts on all aspects of Barrett’s esophagus, from incidence and etiology to treatment.
