Children's Respiratory Nursing is structured in four user-friendly sections:

* The first section provides a general background for children's respiratory nursing.
* Section two explores the various investigations that aid diagnosis and treatment; such as assessment of defects in airflow and lung volume, oxygen therapy and long term ventilation.
* Section three looks at respiratory infection and provides an overview of the common infections in children with reference to national and local guidelines.
* The final section considers the practical issues that impact on children's nurses - the transition from children to adult services, legal and ethical issues and the professional communication skills needed for dealing with children and their families.

* This practical text is essential reading for all children's nurses who have a special interest with respiratory conditions and would like to develop a level of understanding of the special management required in the specialty.
