The perfect reference for residents, fellows, pediatricians, as well as specialists in pediatric cardiology.

The first edition of this text, edited by two of the world’s most respected pediatric cardiologists, set the standard for a single-volume, clinically focused textbook on this subject. This new edition, revised and updated by contributors representing today’s global thought leaders, offers increased coverage of the most important current topics, such as pediatric electrophysiology, congenital heart disease, cardiovascular genetics/genomics, and the identification and management of risk factors in children, while maintaining the clinical focus.
