Diagnostic Pathology: Intraoperative Consultation

Part of the highly regarded Diagnostic Pathology series, this updated volume by Dr. Susan Lester is uniquely organized according to the specific questions from surgeons that a pathologist needs to address during time-limited intraoperative consultations.

Concise, focused chapters, supported by tables, diagrams, radiographs, and photographs, provide the essential information needed for optimal intraoperative diagnosis. A new feature of the 2nd edition is video instruction for frozen-section techniques.

New to this Edition

Thoroughly updated content in every chapter includes new criteria for diagnosis (e.g., limiting surgery for some types of lung lesions), more information on gross evaluation of specimens, and additional photographs for many diagnoses. New chapters include new techniques, such as image-guided lung resections, finding and safely handling radioactive seeds for breast biopsies, tissue banking techniques, nipple margin evaluation for nipple-sparing mastectomy, and evaluation of specimens from patients with epilepsy.

Key Features

Separate chapters cover more than 60 questions posed by surgeons during intraoperative consultations, in addition to general introductory and methods chapters. More than 1,400 outstanding images. Time-saving reference features include bulleted text, tables of diagnostic criteria, annotated images, and an extensive index.

Publication Year: 2018
Edition: 2nd Ed.
Author/Editor: Lester, Susan C.
Publisher: Amirsys Publishing, Inc
ISBN: 978-0-323-57019-0
