The Manual is a practical reference for fellows, residents, and medical students rotating on hematology and oncology subspecialty services.

This edition has been updated to include new standards in the treatment of malignancies and hematologic disorders, mechanisms of action of new therapeutic agents, and the current use of molecular prognostic factors. The information in each chapter is now presented in a consistent format, with important references cited.

Most of the authors are hematology-oncology fellows or internal medicine residents, the physicians who have recent experience with the issues and questions that arise in the course of training in these subspecialties. Primary care practitioners and other health care professionals also will find this manual useful as a quick reference source in hematology and oncology.
