Relied upon by dermatologists and medical practitioners internationally for its unparalleled practical focus on adverse effects and cutaneous reactions, this text is the essential quick-reference tool for patient care and drug safety.

The manual presents the most important information for quick clinical reference – the trade names, half-life, known interactions with other drugs, the pregnancy category into which the drug falls as well as the categories of reactions and the incidence and number of reactions reported for each. The manual also offers a short description of the most common eruption patterns, lists of the drugs that cause important reactions, and a concordance of synonyms, generic names, and trade names. Although the manual has grown from a basis in dermatology, all widely used drugs are included and all types of reaction beyond those found in the skin, hair, and nails are recorded.

Publication Year: 2013
Edition: 19th
Author/Editor: Litt, Jerome
Publisher: CRC Press
Platform: Ovid
