This addition to the 5-Minute Consult Series contains more than 300 entries covering all aspects of adult critical care and pediatric considerations where appropriate.

Each entry is presented on a two-page spread in a consistent format, with bulleted and listed information on definition of the disorder, pathophysiology, diagnosis, medications, surgical interventions, and complications. Where appropriate, entries include a pediatric considerations heading. Algorithms for common and complex diagnoses and treatment options are presented in a special section.

Publication Year: 2011
Edition: 1st Ed.
