Vascular Nursing: Scope and Standards of Practice

Completely updated by vascular nurses for vascular nurses. The first best resource for the RN or APRN vascular nurse at any level and in any setting. Essential for all involved in vascular nursing practice now and throughout this decade.

A workgroup of vascular nurse experts, convened by SVN and ANA, completely updated and expanded the previous edition. With input from nurses nationwide, their revision addressed and incorporated ongoing and anticipated changes in vascular nursing as well as in nursing and health care in general.

The revised scope of vascular nursing practice – the who, what, where, when, why, and how of practice – sets the context for understanding and using the standards: the underlying assumptions, characteristics, environments and settings, education and training requirements, key issues and trends, and ethical and conceptual bases of vascular nursing.

The updated 16 standards frame any evaluation of the outcomes and goals of, and measure the accountabilities for, general and advanced practice vascular nurses. By meeting each standard’s competencies, the vascular nurse can demonstrate compliance with that standard.

A foundational volume primarily for those directly involved with vascular nursing practice, education, and research, other nurses and allied healthcare providers, researchers, and scholars will find value in its content.

Publication Year: 2016
Edition: 1st Ed.
Author/Editor: Sieggreen, Mary
