Published in partnership with the AAOS, this is the first clinical reference designed to empower both orthopaedic surgeons and rehabilitation specialists by transcending the traditional boundaries between these two phases of patient management to achieve better outcomes.

Key features:
- Achieve the best possible outcomes with multidisciplinary content co-written by expert surgeons and physical and occupational therapists. Chapters include discussions of relevant anatomy, surgical indications and techniques, rehabilitation protocols, and specific clinical tips and pearls, as well as clear rationales for each rehabilitation protocol.
- Gain a more thorough, holistic understanding of the entire course of patient management so you can optimally collaborate with your colleagues and accomplish superior results.
- Access guidance at a glance through concise, clearly formatted chapters containing step-by-step protocols and bulleted lists as well as abundant imaging studies, intraoperative photographs and diagrams, and photographs of rehabilitation methods.
