Brings you current surgical approaches and up-to-date expertise on the important and developing topics facing the practice of orthopaedic sports medicine today.

From surgical repair on young athletes and ACL reconstruction to catastrophic sports injuries, this focused collection presents 41 of the most relevant sports medicine lectures presented at five recent AAOS Annual Meetings.

Editor Christopher S. Ahmad, MD and a team of exceptional sports medicine editors produced a text that includes in-depth summaries with current perspectives that relate each these topics to your daily clinical practice.
