Management of Osteoarthritis of the Knee: An International Consensus

Helps you evaluate treatment options for degenerative knee arthritis in the active adult and make the most informed clinical management decision possible.

Because many of the advances in treatment of adult OA occurred outside of North America, the monograph draws heavily from an extraordinary panel of international orthopaedic surgeons from Europe, South America, and Asia who have extensive experience with these new approaches.

Based on an International Symposium presented at the 2002 AAOS Annual Meeting, this monograph offers a balanced perspective with clear explanations of each technique and a careful discussion of outcomes.
