Patients are flooded with conflicting information about the value of cancer screening tests and deciding when, or if, they should have them has never been more difficult. *Cancer Screening Decisions: A Patient-Centered Approach* is a hands-on tool for clinicians to use with patients as they weigh the personal advantages and disadvantages of cancer screenings.

Taking a uniquely visual approach, every page offers clear, colorful graphics to walk you and your patients through every step of the decision-making process for the four most common cancers: breast, colorectal, lung, and prostate. It’s a vital resource for every clinician looking to personalize care and empower patients to make the best possible choices for their health.

*Cancer Screening Decisions: A Patient-Centered Approach* is an exceptional, visual resource designed with a strong emphasis on a shared decision-making process. Patient-facing pages are image-rich and easy to understand; while the provider-facing pages contain step-by-step talking points, easy to understand explanations of complex concepts, and effective communication strategies for each type of screening to guide your conversation. With this resource, you or other members of your care team are uniquely equipped to help guide patients through difficult decision making and inform them completely about the advantages and disadvantages of each screening and what is right for them.

Key Features:
A primer on shared decision making, designed to be used by you or other members of your care team together with patientsPros and cons of each screening under discussionSimple, evidence-based infographics that make cancer screening data easy to understandPatient-facing pages that distill complex, yet essential information into helpful visuals and graphicsClinician-facing pages that serve as practical guides for facilitating challenging conversationsAn effective, patient-friendly way to personalize care that is also efficient for your busy practice, saving you time while providing the highest quality patient careUniquely designed to improve patient-provider communication, increase patient participation in and knowledge of care options, and reduce decisional conflict as patients make choices that align with their personal valuesLarge, colored tabs make navigation quick and simple
