Psychiatric Aspects of HIV/AIDS

This comprehensive text focuses on psychiatric issues associated with HIV/AIDS and provides clinicians with a basic understanding of epidemiology, virology, transmission, and medical treatments inclusive of occupational exposures. Psychosocial, spiritual, and sociocultural aspects of HIV/AIDS are covered, describing implications of HIV/AIDS across minority groups.

The treatment section allows clinicians to organize an effective psychiatric treatment plan for all mental disorders associated with HIV/AIDS. Issues of adherence, prevention, and public well-being are emphasized throughout. The management of medical problems such as delirium, dementia, and pain management in special HIV/AIDS patients with co-morbid substance abuse as well as end of life care is also included.
