Prescribing is a relatively recent extension of the nursing role, and there are few resources to support the prescriber through this complex and expanding initiative. This second edition gives concise, practical and expert advice on all aspects of non-medical prescribing.

Giving a complete picture of the role of the prescriber, the handbook provides evidence-based advice for all nurse and non-medical prescribers from novice and student level through to the established prescriber; for all prescribing courses; and following all the competency areas.

Helping you achieve the best possible results for your patients, the authors offer a wealth of recommendations, guidance and information from their years of experience as practitioners and teachers.

Publication Year: 2011
