Now in its second edition, and reflecting the most recent international cardiology and echocardiography society guidelines, the handbook has been extensively updated throughout and features new sections covering 3D echocardiography, intracardiac echocardiography, contrast echocardiography, speckle tracking echocardiography and emergency echocardiography.

In full color throughout, the text is illustrated with over 300 images. It also includes reference ranges to help with reporting and accreditation exam preparation, and remains the essential reference for trainees undergoing accreditation as well as a daily source of information for those who perform clinical echocardiography.
