The Encyclopedia of Terrorist, Natural, and Man-Made Disasters is the first and only reference compiling all major toxicological incidents, both man-made and environmental in nature.

Many of the man-made incidents resulting from occupational or industrial accidents have also led to environmental contamination, illness, and death for a great number of victims. Now for the first time, these occurrences with hazardous material are documented in a single index. An ideal resource for emergency physicians, EMS professionals, public health professionals, and toxicologists, this encyclopedia describes incidents that can be traced through history. Each event has been researched and reference citations are included. With over 1200 entries, the entire encyclopedia can be searched by source, date, or type of disaster.
