The Year in Urology is now established as the ultimate reference for urologists, surgeons and primary care physicians who want to keep up-to-date with advances in their speciality. Volume 3 continues this series with a further review of key papers from the recent published literature. This volume comprises four major sections, focusing in turn on diagnostic and general urology, urological oncology, non-malignant disorders of the lower urinary tract, and finally, the latest advances in clinical research, new technologies and procedures, that will impact upon clinical practice. Recognised authorities in their respective fields have again selected the most important papers from the leading peer-reviewed journals and provide expert comment on the findings and conclusions presented. The result is a single-volume overview of the last year, highlighting the most important developments in an accessible and easily readable way.
