Featuring 900 full-color illustrations, this book is a concise and practical atlas of the surgical pathology and cytology of the head and neck. Head and Neck Pathology covers the most common head and neck lesions and tumors the general pathologist sees in daily practice and will aid pathology residents and practitioners in quickly narrowing down a histologic differential diagnosis. Integral to the images provided are illustrated criteria for achieving a diagnosis—essentially what to look for when reviewing pathology slides. Differential diagnoses are shown, as are pitfalls in the diagnosis.
