This book provides detailed, state-of-the-art information and guidelines on the latest developments, innovations, and clinical procedures in image-guided and adaptive radiation therapy.

The first section of this volume discusses key methodological and technological issues in image-guided and adaptive radiation therapy, including use of implanted fiducial markers, management of respiratory motion, image-guided stereotactic radiosurgery and stereotactic body radiation therapy, three-dimensional conformal brachytherapy, target definition and localization, and PET/CT and biologically conformal radiation therapy.

The second section provides practical clinical information on image-guided adaptive radiation therapy for cancers at all common anatomic sites and for pediatric cancers, and the third section offers practical guidelines for establishing an effective image-guided adaptive radiation therapy program.

Publication Year 2009
Edition 1st Ed.
Author/Editor Timmerman, Robert D.; Xing, Lei
Publisher Lippincott Williams & Wilkins (LWW)
Doody's Star Rating® Score: 96
Platform OvidMD, Ovid
Product Type Book
Speciality Oncology, Radiology
Language English
Pages 384
Illustrations 273
