Blood Cells has been written with both the practicing hematologist and the
trainee in mind. It aims to provide a guide for use in the diagnostic
hematology laboratory, covering methods of collection of blood
specimens, blood film preparation and staining, the principles of manual
and automated blood counts and the assessment of the morphological
features of blood cells.

Blood Cells enables both the haematologist and laboratory scientist to identify
blood cell features, from the most common to the more obscure.

* Provides essential information on methods of collection, blood film
preparation and staining, together with the principles of manual and automated
blood counts
* Completely revised and updated, incorporating much newly published
information: now includes advice on further tests when a specific diagnosis is
suspected
* Four hundred high quality photographs to aid with blood cell identification
* Highlights the purpose and clinical relevance of haematology laboratory tests
throughout
