This pathophysiology handbook is ideally suited for easy reference in the classroom or clinical environment.

The book presents a summary of physiology concepts for each body system, followed by an overview of important pathophysiology concepts related to 'alterations' in that body system. These pathophysiology concepts provide the necessary foundation for understanding the disease or injury states that are presented next in the chapter. This edition includes new illustrations, completely updated references, and new and updated content on genetics, neuroendocrinology, immunology, hemodynamic monitoring, cardiovascular compensatory mechanisms of shock, and more.
