This clinical manual of ophthalmology continues as a highly practical book on ocular therapy and diagnosis. It features a concise outline format that covers a range of topics, including ocular problems, diagnostic tests, differential diagnosis and treatments. The format provides easy access to and quick retrieval for the clinician, and the book contains an extensive subject index and an ocular drug formulary.

All chapters have been updated to include the latest information on new disease entities, diagnostic techniques, drugs, and treatments, including LASIK and LASEK surgery, cataract extractions, intraocular lenses, use of botulinum for blepharospasm, and medical treatment of glaucoma. Thirty new full-color images have been added.

Publication Year: 2007
