The thoroughly revised second edition is a comprehensive multi-disciplinary text covering all aspects of adult intensive care management. Uniquely, the book takes a problem-orientated approach providing a reference source for clinical issues experienced every day in the intensive care unit.

The text is organized into short topics allowing readers to rapidly access authoritative information on specific clinical problems. Each topic refers to basic physiological principles and provides up-to-date treatment advice supported by references to the most vital literature. Where international differences exist in clinical practice, authors cover alternative views. Key messages summarise each topic in order to aid quick review and decision making.

Edited and written by an international group of recognized experts from many disciplines, the second edition provides an up-to-date reference that is relevant for intensive care units and emergency departments globally. This volume is the definitive text for all health care providers, including physicians, nurses, respiratory therapists, and other allied health professionals who take care of critically ill patients.
