Targeted Radionuclide Therapy

This book represents a comprehensive amalgamation of the radiation physics, chemistry, radiobiology, tumor models, and clinical data for targeted radionuclide therapy.

Radioimmunotherapy, also known as systemic targeted radiation therapy, uses antibodies, antibody fragments, or compounds as carriers to guide radiation to the targets. It is a topic rapidly increasing in importance and success in treatment of cancer patients. This text outlines the current challenges and provides a glimpse at future directions. With significant advances in cell biology and molecular engineering, many targeting constructs are now available that will safely deliver these highly cytotoxic radionuclides in a targeted fashion.

Publication Year 2010
Edition 1st Ed.
Author/Editor Speer, Tod W.
Publisher Lippincott Williams & Wilkins (LWW)
ISBN 978-0-781-79693-4
Platform OvidMD, Ovid
Product Type Book
Speciality Oncology
Radiology
Language English
Pages 608
Illustrations 110
Included In Lippincott Williams & Wilkins Classic Book Collection 2018
Lippincott Willliams & Wilkins Radiology Book Collection
