Epidemiological Research Cases in China

We hope this book will increase awareness of foreign colleagues to Chinese epidemiologists and strengthen the communication and cooperation between Chinese and international epidemiologists.

The chapters in this book are chosen from the Chinese version of Epidemiological Research Cases. Although this book can't represent the whole picture of epidemiological studies in China, it reflects the thoughts and methodologies used by epidemiologists in China and the contribution to solving the health problems in the Chinese population.

Publication Year: 2007
