Now in its fifth edition, this Photographic Manual of Regional Orthopaedic and Neurologic Tests describes in step-by-step fashion how to perform these tests.

Each chapter begins with a decision tree of the orthopaedic examination of an anatomic area, followed by a brief description of the anatomic area, usually with an accompanying drawing. The presentation of each test begins with a clinical description and a box of clinical signs and symptoms, followed by a brief description of the procedure with a photograph demonstrating the position of the clinician and the patient. The author then presents a brief rationale for the test and suggests diagnostic imaging procedures where appropriate.

Features:
--NEW: Second color added to the design
--Logical progression of presentation that follows what a clinician would do with a patient
--Many correlative anatomy drawings of the underlying features
--Very simple and visual presentation of how to do these tests
