Biopsy Interpretation of the Central Nervous System focuses on differentiating lesions with similar histologic appearances. Differential diagnosis based on multiple factors is emphasized to enable efficient comparison of similar entities. The concise text highlights the distinguishing histologic features of each entity, discusses the ancillary testing necessary to make a confident diagnosis, and places each lesion in the setting of its clinical significance.

More than 300 full-color photomicrographs demonstrate the diagnostic features of each entity. Lists of differential diagnoses based on other factors, such as location and typical age of occurrence, are also included.
