Written by residents and attendings at New York’s Hospital for Special Surgery, this manual is a practical, concise, reference for orthopaedic residents.

The book is organized by rotation—general/basic science, arthroplasty, fractures, pediatrics, tumors, sports, spine, foot and ankle, and hand—and covers the most frequently discussed clinical and basic science topics. Information is drawn from Hospital for Special Surgery residency lectures, attendings' teaching points, and leading textbooks and journal articles.

Dozens of photographs and illustrations add clarity to explanations of pathologies and surgical techniques. And superb organization allows you to find needed information with ease.
